

Retrospective report

Seven Seas Spa Website

Add your notes below, use bullet points where useful.

User Story Status

- All must-have and should-have user stories have been completed.
- A few could-have user stories were not started and can be reserved for future updates.

What has been achieved

- The Seven Seas Spa website is fully functional, featuring key sections like Services, About Us, Contact Us, Blog, and Testimonials.
- The website meets almost all of the initial user stories, providing a seamless and engaging user experience.
- The use of AI tools, like Copilot, accelerated development and improved content creation efficiency.

Areas for improvement

- Some minor adjustments were required for responsiveness on smaller devices, particularly in the layout of certain sections.
- Future projects could benefit from clearer guidelines on when to use AI tools and when manual intervention is required to ensure consistent quality across the site.

Lessons learned

- AI tools can significantly accelerate development, but human oversight is necessary to ensure quality and alignment with project goals.
- Early testing for responsiveness across various devices can prevent layout issues later in the process, reducing the need for post-launch fixes.
- Clear and specific goals improve the accuracy of AI-generated content, leading to better results and minimizing the need for revisions.
